

# Sage 300 ERP

## Vertical Industries

### Mine Management

Sage 300 ERP (formerly Sage ERP Accpac), which includes Sage CRM, bridges the gap between financial information and production information in the mining industry with a configurable set of workflow and business intelligence tools that provide valuable information anytime, anywhere.

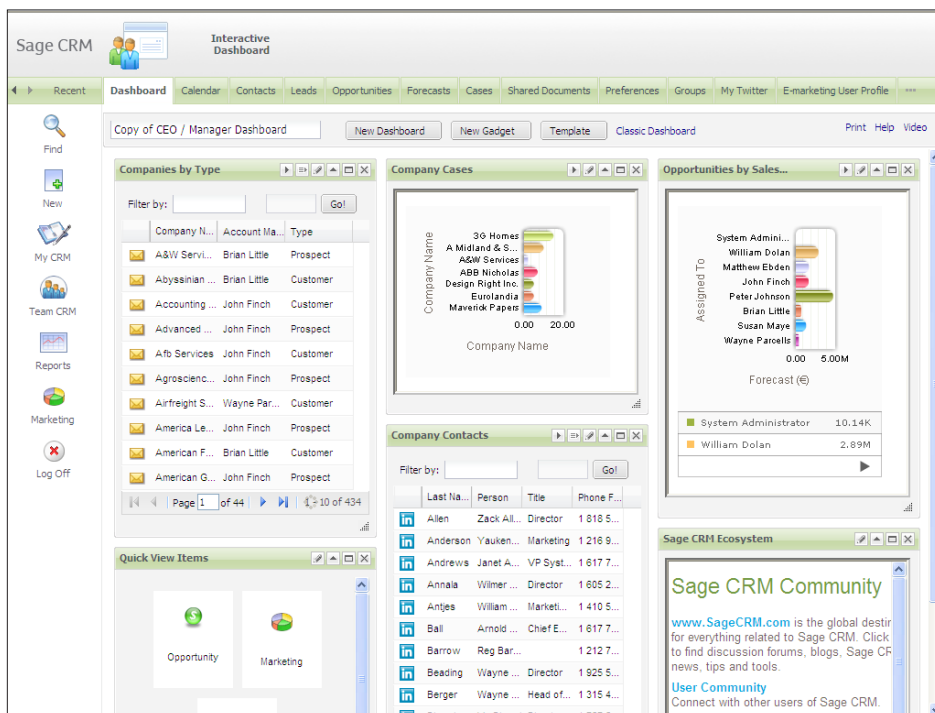

#### Sage 300 ERP for Mining—A Rock-Solid ERP

Sage 300 ERP includes a wide range of modules to handle the entire mining cycle, from development to exploration to production and sales. Sage 300 ERP is a highly configurable solution driven by workflow rules and authorizations to ensure accurate data capture and complete control over budgets.

Easily manage global commerce across multiple companies or subsidiaries. No matter where you do business, Sage 300 ERP helps you maximize your international insight and exchange information worldwide. Set up multiple companies in one or more databases, run processes, close books, and report results by company or in a consolidated company. Sage 300 ERP ships with five language overlays that allow you to configure the language of the software for individual users. Sage 300 ERP also provides robust multicurrency and analysis capabilities so you can optimize your international opportunities.

#### Core Financial Modules

Sage 300 ERP is renowned for its rock-solid financials and reporting. The transactional analysis capability of all modules gives you more in-depth costing information in the general ledger. Your chief financial officer (CFO) will be able to keep a concise general ledger with up to ten levels of analysis, including comprehensive information on additional costs to equipment, cost centers, or responsibility centers for dynamic reporting.

### BENEFITS

- Dimensional General Ledger with up to 99 years of history online.
- Transactional analyses to provide costing at the shaft, process, subprocess, and equipment levels.
- Workflow management of procurement and internal resources that are dynamically linked to cost centers, allowing you to easily analyze and authorize expense codes with complete control.
- Integrated fixed asset management that complies with IFRS and Sarbanes-Oxley.
- Capital equipment management with advanced maintenance and repairs schedules.
- The flexibility to capture production and exploration data with configurable time periods and units of measure to produce cost-per-ounce and cost-per-meter reporting.
- Comprehensive business intelligence combining financial and production data through an informative, easy-to-use management dashboard.

● Sage CRM helps you communicate, collaborate, and compete.

“Sage 300 ERP meets all of our requirements, and it is easy to learn and intuitive to use.”

Christien Landry  
IT Manager  
Major Drilling Group International

## Small Investment. Big Return. Peace of Mind.

Discover the Sage 300 ERP technology difference! Get one unified solution on which to build your business—enabling more efficient processing, more productive people, and the ability to gain real insight into your business. Sage 300 ERP ensures your business is built on a solid foundation, providing superior architecture that gives you the power you need today with the flexibility to adapt tomorrow. Reap the rewards of a global reach solution with the breadth of functionality to support multitenancy and multinational organizations with the local touch needed for your business. Your newfound freedom of choice is supported by a collaborative ecosystem, ensuring success for the life of your business. And of course, with over 30 years of supporting businesses just like yours, Sage technology is proven, reliable, and experienced.

---

### Workflow

Sage 300 ERP quickly and efficiently processes simple data-entry requests from the mine to the appropriate cost centers or budgets with built-in, comprehensive authorization capabilities. The complete workflow process drives accurate data capture, improves decision making, and reduces potential errors through a built-in authorization trail. The workflow solution manages procurement and internal stock issues by allowing for the creation of an unlimited number of workflows and associated rules and alerts. These simple-to-use screens provide CFOs with the correct information analyzed appropriately at data entry. As requisitions are made, they are automatically allocated to the appropriate cost centers, shafts, processes, and equipment, based on user profiles, stock structures, or expense codes. This saves time and eliminates the need for reallocations at month end.

---

### Asset Management and Maintenance

Sage 300 ERP appreciates the need for capital budgeting and end-to-end asset management. Investment in assets is a significant part of any mining operation, and Sage 300 ERP offers the appropriate controls over budgeting and procurement while helping you with compliance to regulations like IFRS and Sarbanes-Oxley. Asset management is achieved through a configurable set of modules, from asset depreciation and acquisition to auditing and tracking. Asset maintenance is a fundamental part of mining operations. Sage 300 ERP tracks the cost of equipment and provides a comprehensive history of all assets, including faults, agreements, warranty claims, return authorizations, and a complete audit trail. This makes it easier to predict the asset's life cycle and financial profitability with full statistical analysis.

---

### Production and Exploration Data

The production data capture module allows users to set up an area or operation against which costs can be tracked, such as shafts, open pits, or tailings. Beneath this layer of costs lies a lower level of processing such as shaft sinking, development waste, or stopping (depending on the environment), which is linked back to the top level. Typically, the plant area tracks the processing of material from all areas and links it to a subcomponent of the general ledger account for reporting purposes only. The module allows users to specify units of measure for the production data captured, such as meters advanced, tons surveyed, tons hoisted and treated, and carats recovered. This is captured as needed—daily, weekly, or monthly—and linked to the business intelligence suite. Sage 300 ERP has been designed to manage surveying and monitoring activities and capture geological site survey information. Information from the mobile devices is integrated throughout the mining suite to give management increased visibility and operational control.

---

### Business Intelligence

With real-time metrics and the ability to create personalized dashboards and meaningful reports, you have up-to-the minute visibility across all departments and companies in your system and at-a-glance analytics that can be used for strategic planning. Sage 300 ERP helps you improve collaboration and accelerates information exchange for a 360-degree view of your business. Sage 300 ERP facilitates the creation of reports that combine actual vs. budgeted data with complete drill down to the detail level of production data—information every CFO needs. The financial and production data is audited and approved, giving the board of directors comfort that operations and finance are in synchronization. The reporting modules allow for in-depth analysis at any level—right down to equipment or shaft information—which helps mining companies like yours make faster, better strategic decisions.
